Oct 30 19 11:30:14 am			<p>A policy with the strategic purpose "to ensure the environment is protected during roadside project work and regular roadside maintenance", and "protect and revitalise areas of recognised ecological significance (Conservation Value)", is markedly deficient if it fails to require appropriate dealing with threats to the roadside environment. South Eastern Australia is all too frequently dominated by vegetation introduced to Australia by colonists and/or immigrants. Too many ecologically damaging introduced species are permitted, encouraged, or deliberately planted, to dominate roadside environments. Many introduced species possess characteristics which not only dominate roadsides denying habitat for native species, threatened or otherwise, but also detrimentally impact air, water, and land quality. To presume to protect and revitalise roadside environments without preventing ongoing propagation and/or infestation by introduced species, acts contrary to claimed intentions to "protect local fauna and biodiversity ecosystems". Roadside project or maintenance work which promotes, protects or maintains, invasive or otherwise detrimental introduced vegetation species, is fundamentally in breach of the principles of this policy, and the policy should expressly recognise this to be so.</p>
Oct 15 19 02:50:25 pm			<p>I want to see SVC using glyphosate free herbicides. They are now readily available and there is also the option of using steam wands and propane torches.</p>
